

ASSEMBLYAI VOICE AGENT HACKATHON · LIVE ON A REAL PHONE LINE

SilverLine

The voice line that waits.

A slow-safe voice companion for elderly patients. Confirms visits and medications over a plain phone call — then proves it with a signed receipt.

silverline-voice.vercel.app · +1 (804) 315-1987 · github.com/PhiBao/silverline-voice

THE PROBLEM

Voice bots got faster. Patients got **older**.

2 in 12s

interruptions a default-tuned bot inflicts on one hesitant caller — measured live in our demo

Thursday → “Tuesday?”

fast bots guess dates and mangle drug names instead of asking again

0 proof

after the call there is nothing the family can check — just a transcript nobody reads

THE USER

Margaret, 78.
No app. No account. Just a phone.

78 yrs

Primary: Margaret and millions like her — slow speech, plain phones, no apps

1 link

Viral loop: adult children who worry from afar and forward the receipt — “see, Dad’s Thursday is set”

\$ / visit

Payer: single-location clinics drowning in reminder phone tag and no-shows

LIVE PROOF — SEP 22, REAL PSTN CALL

8 minutes, 8 seconds.
One booking. Receipt valid.

8:08

completed Twilio →
SIP → AssemblyAI
call, zero errors

**Thu
10AM**

real booking: Sep 17,
Dr. Rao — double-
book attempt visibly
rejected

3 / 3

medications teach-
back confirmed,
keyterm-boosted
hearing

✓ +
\$0.60

HMAC-signed receipt
verified true; whole
call ≈ sixty cents

Five mechanisms, **one loop.**

- **Patient turn-taking** — 1200/3500 ms envelope + semantic barge-in; switchable live via **session.update**
- **Dynamic keyterms** — vocabulary narrows per stage (clinic → drugs), no reconnect
- **5 function + HTTP tools** — availability, transactional booking, meds, receipts
- **Single-use token mint** — API key never reaches the browser; **session.end** hygiene
- **Real phone path** — Twilio SIP trunk → **sip.eu.assemblyai.com** (EU accounts 503 on the US ingress — found live)
- **Supabase Postgres** — durable bookings/receipts; server-side caller memory

COMPETITION

Everyone built fast.
Nobody built patient.

ENTRY	WHAT IT DOES	WHAT IT LACKS
EverCall	Daily grandma chats + mood radar	Simulated calls; observes, never acts
VoiceMed Aria	Triage nurse, strong safety	Fast-tuned; no receipts, no phone
CALL-E Solo	Clinic booking + read-back	Booking only; no meds, no proof artifact
SilverLine ✓	Waits + hears + books + teaches + proves — on a real phone line	—

BUSINESS MODEL

Cheaper than **phone tag.**

\$49-199

per clinic location / month —
replaces hours of staff reminder
calls

**\$0.50-
1.50**

per confirmed visit — priced
against the no-show it prevents

\$9 / mo

caregiver plan: receipt history +
medication-adherence view

ROADMAP

Pilots → one clinic → the patient-voice layer.

Older-adult tone pilots → single-location paid trial → pharmacy refills, scam warnings, WhatsApp intake.
